

## WebMail Access

The WebMail Web based interface will allow you to access your email using a Web Browser from any computer connected to the Internet. It will provide basic email functionality including the viewing of all your emails on the server as well as sending new emails.

To access the WebMail interface point your Web Browser to:

mail.yourdomain.com (do not add the http://)

Example: If your email address is joe@company.com then point your browser at mail.company.com

Once you see the WebMail interface please login using your full email address and the password for your account.

**NOTE: It is important to remember to log off the WebMail and close the Web Browser window when using a public computer.**

## Changing Email Password

You can change your email password using the WebMail interface. Login in to WebMail and click on "Settings" menu option.

**NOTE: For your security please choose a hard to guess password. Adding numbers or special characters like "- + %" will make your password even more secure.**

Welcome to  
**WebMail**
